Pollinators and Plants: A Perfect Match!

The plants in this pollinator lawn have coevolved with pollinators over millions of years to form the perfect partnerships. Pollinators select flowers based on their shape, size, smell, and color.

The clouded yellow butterfly has specialized mouth parts that enable it to reach inside self-heal's tubular flowers.

The tiny sweat bee is attracted by the aroma of creeping thyme's small flowers.

The endangered rusty patched bumble bee is attracted to white flowers, like those of Dutch white clover.
